

**FOR IMMEDIATE RELEASE**

***PICTORVISION ANNOUNCES NEW CUSTOM WIRELESS  
CONTROL SYSTEM FOR CINEFLEX***

**Van Nuys, California**, February 3, 2009. Pictorvision has announced the design and availability of a new wireless kit for the Cineflex camera system that allows the camera operator to remotely control the system for use in a number of extreme situations, conditions and installations. This is just the latest example of the dedication and technical skill-set of Pictorvision that demonstrates its innovative leadership in stabilized and precision control solutions for the entertainment industry.

While shooting footage for the Nordic Championships, Pictorvision's ingenuity was once again put to the test. Taken the extreme situation, Pictorvision technicians illustrated their expertise by designing a system to be used on a snowmobile, while operating it remotely with an antenna and video microwave link. "The remote link worked well, even through the roughest terrain of forest, the remote signal was never lost" commented Tom Hallman, President of Pictorvision. "The kit worked great" said Chris Chanda of Aerial Camera Operations Ltd., and designer of the snowmobile rig. "The situation worked to our advantage, as the venue had a natural bowl shape and the cross country trails were tiered up the bowl" he added.

With this newly developed system, Pictorvision's Cineflex Remote Control package can be used on such installations as camera cars, cranes, boats and snowmobiles – anytime that the operator cannot be with the system during operation. With range up to 15 miles (depending on conditions) and a frequency of 2.4 – 2.483GHz, license-free band, spread spectrum frequency hopping and error detection technology, the system achieves a very reliable, noise and interference-immune operation. The transmission of the video signal can also be transmitted using any number of standard analog or digital microwave systems. The custom Remote Control kit is available for rent exclusively with Pictorvision's Cineflex HD camera systems.

With over 30 years of experience, Pictorvision is the Art and Science behind your imagination with a suite of products including the Pictorvision ***eclipse***, Wescam 35mm, Cineflex systems, Wescam RED One, Wescam HD and Wescam SD products.
